

# LCA Administration Advanced (4)

## DMC RADE Tools

Version 5 Release 11  
May 2003  
EDU-ENOV-E-LAD-AF-V5R11

Copyright DASSAULT SYSTEMES 2003

1

## DMC RADE Tools

### Objectives of the Course

In this course, we will learn how to customize the Data Model using using the CAA-Data Model Customizer

### Targeted audience

ENOVIA LCA Administrator

### Prerequisites:

CAA V5 Programming

Copyright DASSAULT SYSTEMES 2003

2

## Table of Contents (1/2)

<b>1. ENOVIA V5 : CAA V5 DMC RADE Tools</b>	<b>p.1</b>
Objectives of the courses	p.2
Table of Contents	p.3
Planning	p.5
<b>2. Administration Concepts</b>	<b>p.6</b>
Presentation	p.7
Global Schema	p.8
Domain / Business Domain Definitions	p.9
Data Server / Data Domain Definitions	p.10
Project & Roles Definitions	p.11
Authorized customizing Modeler	p.12
Methodology Overview of the Customization	p.14
<b>3. Environment Development / MsDev Plug ins</b>	<b>p.15</b>
New CAA V5 Workspace	p.16
Tool level / UNIX Connection	p.17
Create a new Framework	p.18
NT Prerequisites	p.19

4

## Planning

*In this course, you will see CAA V5 RADE Tools for Data Model Customizer*

- Administration Concepts
- Environment Development / MsDev Plug ins
- Rational Rose
- New ENOVIA Applications: Document and Action
- Publish Shell
- Update Database
- DMC without RADE

Copyright DASSAULT SYSTEMES 2003

5

## Administration Concepts

*You will become familiar with the Administration Concepts*

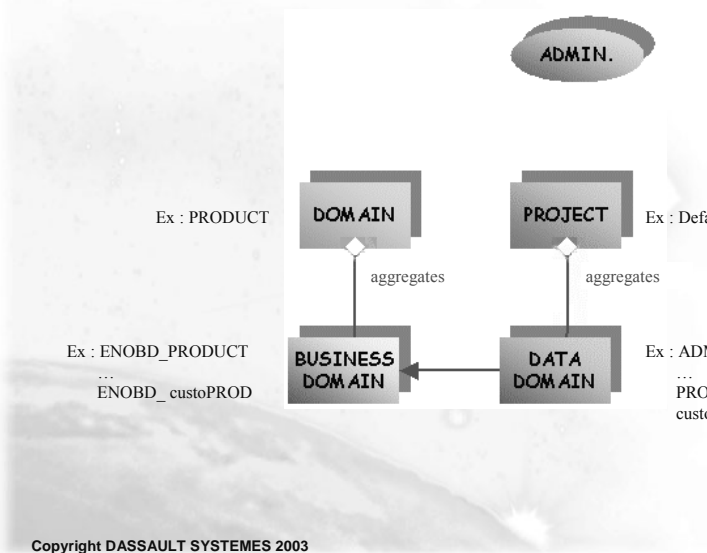

- ▣ Presentation
- ▣ Global Schema
- ▣ Domain / Business Domain Definitions
- ▣ Data Server / Data Domain Definitions
- ▣ Project & Roles Definitions
- ▣ Authorized customizing Modeler
- ▣ Methodology Overview of the Customization

Copyright DASSAULT SYSTEMES 2003

6

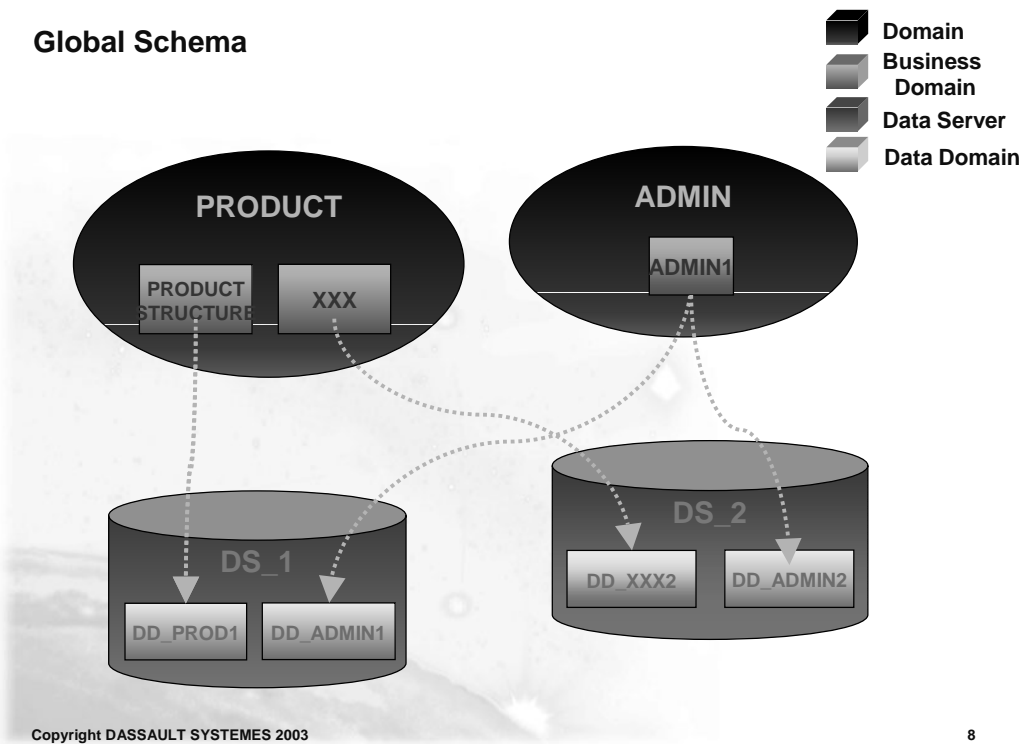

## Presentation

- The following diagram introduces the main concepts involved in Project Management. It's described by the VPMAdm.adm file.

7

## Global Schema

8

## Domain / Business Domain Definitions

### Domain

- ◆ Identifies an ENOVIA application, so corresponds to a modeler
  - Product Structure for instance
- ◆ Gathers all the customizations of the associated data schema (Package)

### Business domain

- ◆ Define by the .metadata
- ◆ Particular customization of a Domain
- ◆ A Domain aggregates several Business Domains. But a Business Domain corresponds to an unique Domain.
  - Associated Business rules
  - Associated Status Graphs

Copyright DASSAULT SYSTEMES 2003

9

## Data Server / Data Domain Definitions

### Data Server

- ◆ Data repository
- ◆ Corresponds to a string connection (alias in DB2 catalog, or tnsname.ora for Oracle)
- ◆ Database instance for example

### Data Domain

- ◆ Instantiation of a Business Domain within a particular Data Server, so is a kind of persistent view. A Business Domain can be located in several Data Domain (in theory)
- ◆ In V5R7, an Environment is equal as a Data Domain

Copyright DASSAULT SYSTEMES 2003

10

## Project & Roles Definitions

### Project :

**A group of Data Domains.** You can define as many projects as you want. A default project (called 'DefaultProject') containing all the installed modelers is provided with ENOVIA LCA.

### Roles

The roles manage the users access to the database (have a look on the P&O)

Copyright DASSAULT SYSTEMES 2003

11

## Authorized customizing Modeler

The different Modeler to be customized are :

### PRODUCT (Product Structure)

- VPMItemInstance
- VPMPartMaster
- VPMPartVersion
- VPMProductRootClass

### DOCDIR (Document)

- VPMDocSecuredFile
- VPMDocumentIteration
- VPMDocumentIterationFormat
- VPMDocumentRevision
- VPMTTPDocumentMaster

### APLAFL (Actions)

- Action\_Deliverable
- Action\_Documentation
- Action\_Manufacturing
- Action\_PenetrationRequest
- Action\_SignOff

### APLECO (ECOECR)

- ECO
- ECR

Copyright DASSAULT SYSTEMES 2003

12

## Authorized customizing Modeler

### • CONFIG

- Category
- Specification

### • STDPART (Standard Part)

- VPMDocSecuredFile
- VPMDocumentIteration

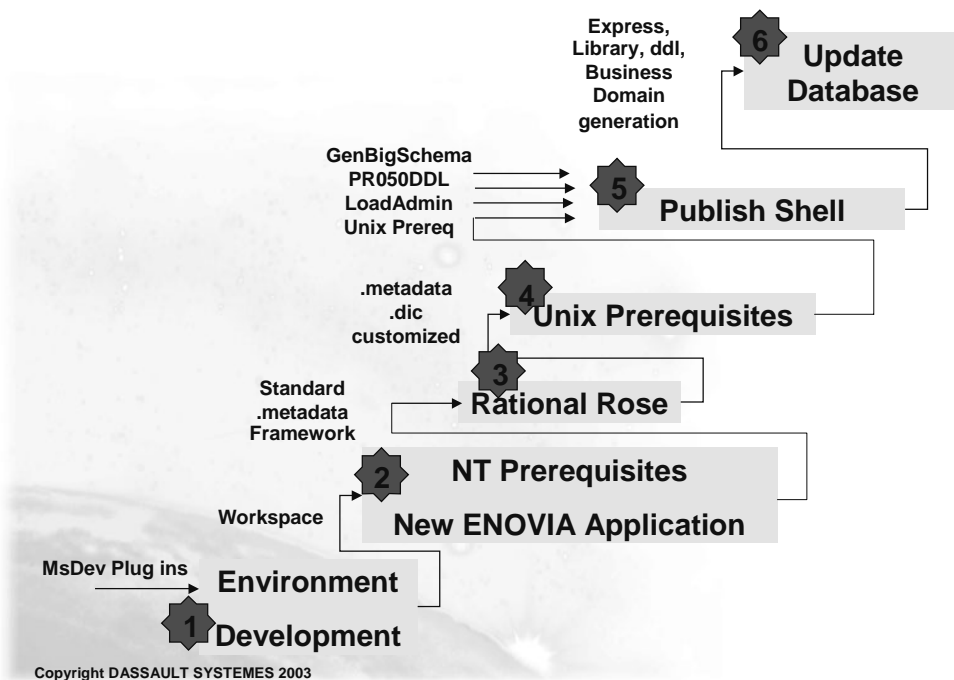

### • Object from scratch

Copyright DASSAULT SYSTEMES 2003

13

## Methodology Overview of the Customization

Copyright DASSAULT SYSTEMES 2003

14

# Environment Development / MSDev Plug ins

*You will become familiar with CAA V5 RADE Tools*

- ▣ New CAA V5 Workspace
- ▣ Tool level / UNIX Connection
- ▣ Create a new Framework
- ▣ NT Prerequisites
- ▣ New ENOVIA Application : Product Structure

Copyright DASSAULT SYSTEMES 2003

15

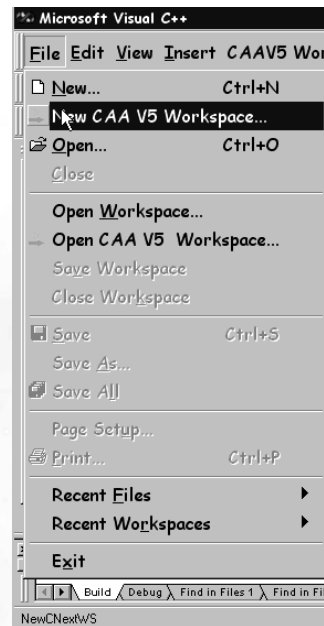

## New CAA V5 Workspace

1

**Create a CAA V5 Workspace using  
the MsDev Wizards**

*Equivalent to the mkdir Unix Command*

Copyright DASSAULT SYSTEMES 2003

16

## Tool level / UNIX Connection

1

**Inform:**

- the Tool level
- the UNIX connection

New CAA V5 Workspace

**New Workspace**

Create a new Workspace where you will create new objects or edit existing ones.

Create with:

Workspace Directory (local path):

Tool level:

Build On UNIX

UNIX Host:  UNIX Login:

Directory for build:

Cancel < Previous Next >

Copyright DASSAULT SYSTEMES 2003

17

## Create a new Framework

1

**Define Prerequisite Workspace**

New CAA V5 Workspace

**New Workspace**

Choose what you want to do first in your new workspace:

- If you have access to Workspace Manager tools, you can modify an existing framework under Configuration control by attaching it from a reference workspace.

Copy and modify frameworks through the Workspace Manager

Copy and modify frameworks from a reference workspace

Create new generic framework

Define Prerequisite Workspace

Migrate a workspace

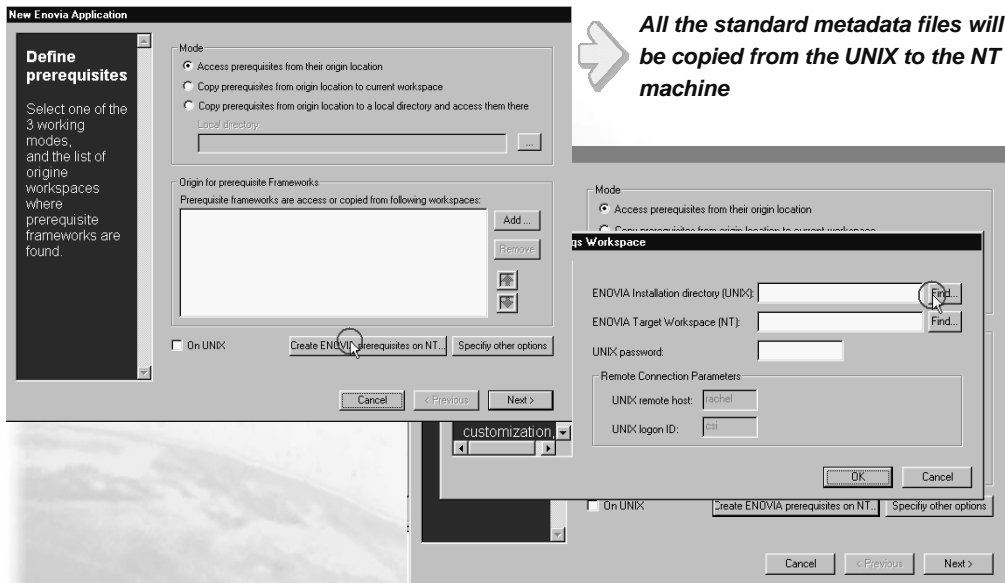

Cancel < Previous Finish

Copyright DASSAULT SYSTEMES 2003

18

## NT Prerequisites

2

Copyright DASSAULT SYSTEMES 2003

19

## New ENOVIA Application : Product Structure

2

At this end of this step, the file tree is automatically generated with:

- *PublicInterfaces*
- *IdentityCard*
- *CNext*

And additionally:

- *UML model directory*

Rose is automatically launched so you can define your UML design

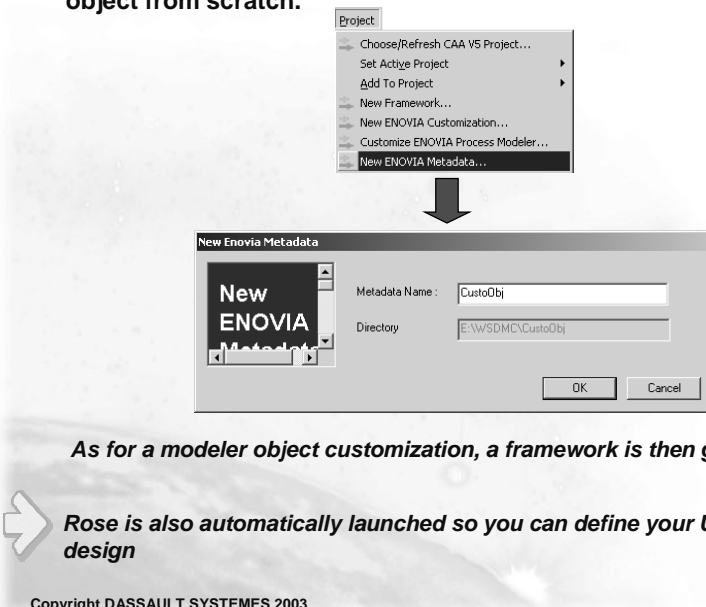

Copyright DASSAULT SYSTEMES 2003

20

## New Enovia Metadata

- The new ENOVIA Metadata RADE plug-in is used to create a new modeler object from scratch.

*As for a modeler object customization, a framework is then generated*

*Rose is also automatically launched so you can define your UML design*

Copyright DASSAULT SYSTEMES 2003

21

## Rational Rose

*You will become familiar with the UML Representation*

- ▣ Presentation
- ▣ UML Static Representation
- ▣ Generate

Copyright DASSAULT SYSTEMES 2003

22

## Presentation

3

The application's method recommends the use of static and dynamic views of a logical model and a physical model to capture the in-process products of object-oriented analysis and design. Using the notation, the application enables you to create and refine these views within an overall model representing your problem domain and software system.

This overall model contains classes, use cases, objects, logical packages, operations, component packages, components, processors, devices and the relationships between them. Each of these model elements possesses model properties that identify and characterize them. The notation provides graphical icons to represent each kind of model element and relationship.

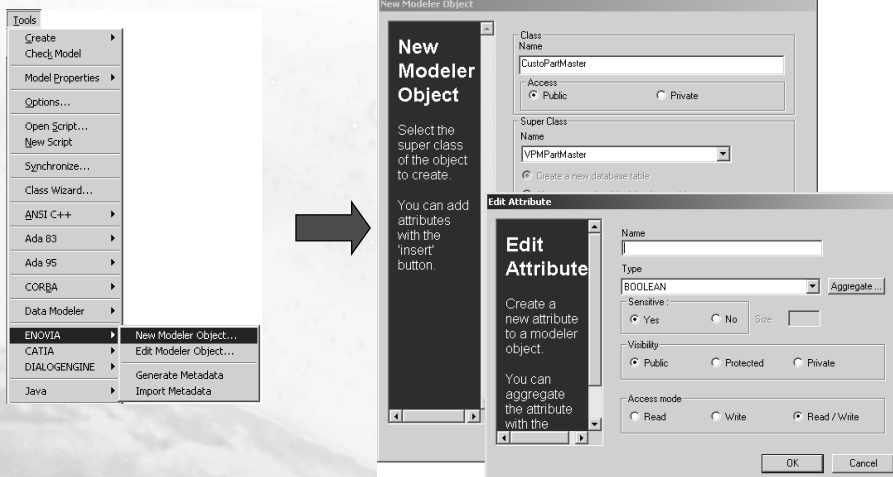

Copyright DASSAULT SYSTEMES 2003

23

## Modeler Object creation

Rose add-ins allow to create new modeler Objects inheriting from existing ones or modeler object from scratch depending on you have chosen to perform a New Enovia Customization or to create a new metadata.

3

Copyright DASSAULT SYSTEMES 2003

24

## UML Static Representation

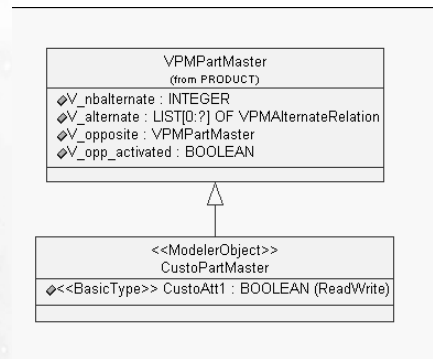

3

The Classes are represented graphically as boxes. Under parentheses, the Super class is indicated.

The list of the attributes of a Class is represented like a little blue box, followed by the attribute type. The right access on the attributes can also be precised (for instance ReadWrite).

The inheritance between classes are designed with an arrow

Such a UML representation is called the Static representation.

Copyright DASSAULT SYSTEMES 2003

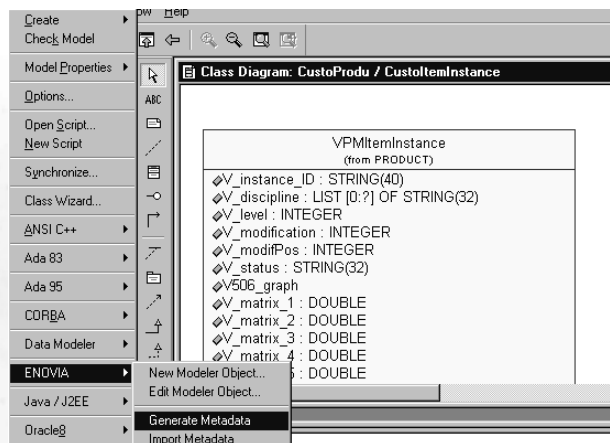

25

## Generate

3

- When you have finished the UML representation, use the « Generate » Rose add- ins to generate the .metadata and .dic files

- Close Rational Rose

- Equivalent to manually create your own .metadata file containing your new entities.

To generate the uuid, use the Uuidgen.exe provided by MsDev (open a DOS window, launch uuidgen)

Copyright DASSAULT SYSTEMES 2003

26

# New ENOVIA Applications: Document / Object From scratch

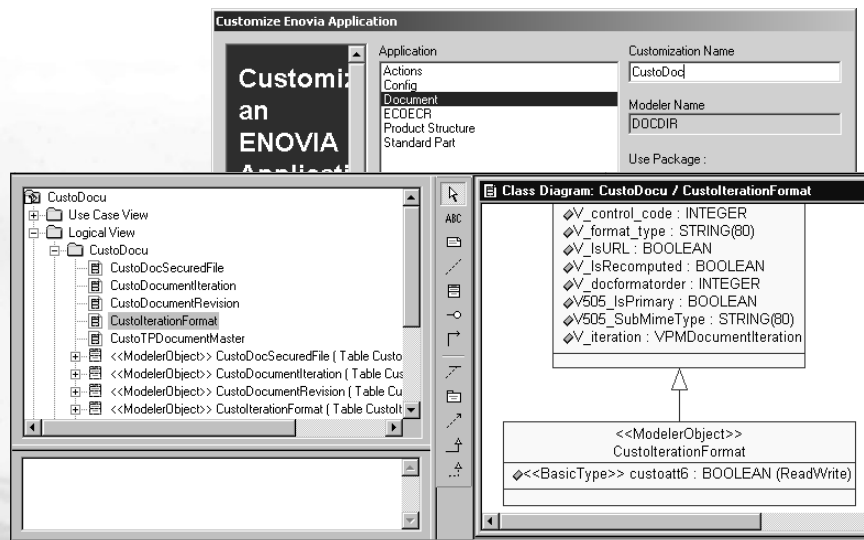

*You will become familiar with CAA V5 RADE Tools*

- Document
- Action
- UNIX Prerequisites

Copyright DASSAULT SYSTEMES 2003

27

## New ENOVIA Application : Document

**Design in Rational Rose your UML Representation for the Action**  
**Generate the metadata**  
**Close Rational Rose**

Copyright DASSAULT SYSTEMES 2003

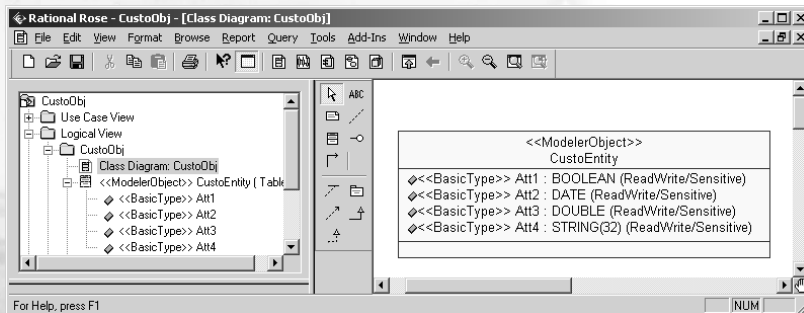

28

## New ENOVIA Application : Object From Scratch

In MSDEV Project menu  
choose  
"New Enovia metadata"

Design in Rational Rose your UML Representation for the Document  
Note that you cannot inherit from another entity  
Generate the metadata

Close Rational Rose

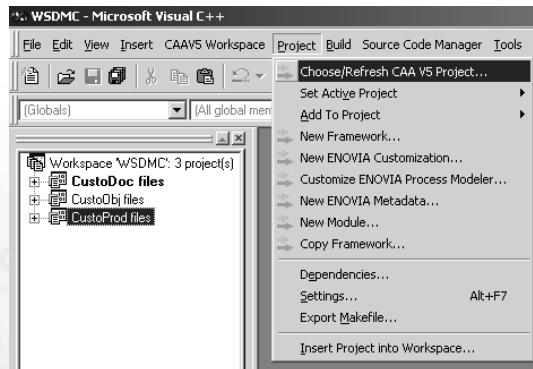

Copyright DASSAULT SYSTEMES 2003

29

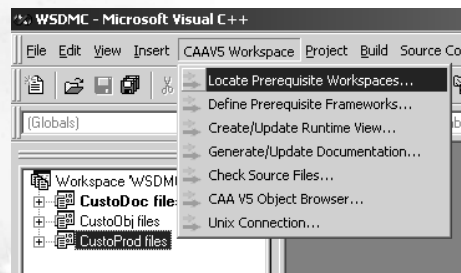

## UNIX Prerequisites

4

Refresh your project

Locate and define the UNIX Prerequisites  
Equivalent to the make command:  
`mkGetPreq -p $CURRENT_WS`

Copyright DASSAULT SYSTEMES 2003

30

# Publish Shell

*You will become familiar with the Data Model Generation*

- ▣ Launch the Publish Shell for the Product
- ▣ Launch the Publish Shell for the Document
- ▣ Launch the Publish Shell for the Action
- ▣ Update the Run Time View
- ▣ Express Generation
- ▣ Library Generation
- ▣ ddl Generation

Copyright DASSAULT SYSTEMES 2003

31

## Launch the Publish Shell for the Product

**5**

Launch the Publish Shell

Fill in some parameters

If you set "Simulate Mode" to "Yes", the database is not modified. It is for test purpose or just if you want to generate files for a further manual installation or deployment

The screenshot shows the ENOVIA software interface. The 'Build' menu is open, and 'Publish ENOVIA Data...' is selected. The 'ENOVIA Publication Parameters' dialog box is open, showing a list of settings and their values. The settings include:

Setting	Value
CATSettingPath	/usr/enovia/B10/atx_a/CATSettings
ENOVDatabaseAlias...	ENOV5R10
ENOVDatabaseType	db2
ENOVDB2_HOME	/home/data/db2adm7
ENOVDBAID	ev5st3
ENOVDBAPSSD	enov5r10
ENOVLevel	V5R10
ENOVORACLE_HOME	/u/enn/oracle/\$MkMKOS_NAME
ENOVOutputDirectory	\$/HOME/ENOVCustomization
ENOVSimulatePublish	YES
ENOVTableSpace	ENOTBS
ENVDIR	ENOVIA_LCA.V5R10.B10
ENVNAME	/CATerw
TNS_ADMIN	/u/enn/oracle/\$MkMKOS_NAME/network/admin

Copyright DASSAULT SYSTEMES 2003

32

## Update the Run Time View

5

**The Publish Shell also updates the Run Time View**

Equivalent to the UNIX command :  
mkrtv

Copyright DASSAULT SYSTEMES 2003

33

## Express Generation

5

**The Publish shell generates the .express file using the .metadata previously created**

Keep in mind:

Manually , you would have used the GenBigSchema .sh shell without forgetting to put all the metadata files mentioned in the shell (including your new ones) on the directory:

```
$CURRENT_FW/Cnext/code/dictionary
```

The express schema then generated in the \$CURRENT\_FW/ProtectedInterfaces

```
GenBigSchema.sh -l TEMPLAT CATArrangement CATPlantShipModeler DOCDIR  
ENOfdtSch ElectricalDictionary ElectricalExtensions GRAPH MBOM PROCESS  
PRODUCT Tol CATEquipment CATInstrument CATPiping STDPART XXX -n  
ENOTemplateSch -diri $CURRENT_FW/Cnext/code/dictionary -diro  
$CURRENT_FW/ProtectedInterfaces
```

Where XXX is your metadata file name

Copyright DASSAULT SYSTEMES 2003

34

## Library Generation

### The Publish shell generates the libraries

Equivalent to:

Compile your framework: `mkmk -a`

Then you have generated the `libXXXSch.a` files under `$RUN_VIEW /aix_a/code/bin`

**NB :** “xxx” stands for “ENO” + the name of the parent domain for a standard modeler customization, or directly the name of the created domain if the new object inherits from nothing.

Copyright DASSAULT SYSTEMES 2003

35

## ddl Generation (1/3)

### The Publish shell generates the ddl files

Equivalent to manually:

Under the `CNext` directory, create a `reffiles` directory, then a `ddl` one. This directory will receive the `.sql` (or `.clp`) files generated.

Then you have to call the `PR050DDL` shell from the Run Time View

- The `PR050DDL` shell uses the split files `/*.param`. These files specify which entity is considered as root of a new tree so that a new table is created to improve performance algorithms.

- Be careful to save the original `.sql` files

Copyright DASSAULT SYSTEMES 2003

36

## ddl Generation (2/3)

```
PR050DDL ENOTemplateSch -oracle -df X -P $CURRENT_FW/map/ -m TEMPLAT
DOCDIR ElectricalDictionary ElectricalExtensions GRAPH MBOM PROCESS
PRODUCT Tol XXX STDPART -n $USER_DBO -T $TABSPACE_DBO -I $TABSPACE_IX_DBO
-s $USER_DBO -spdir $CURRENT_WS
/$OS/reffiles/DBMS/Generator:$RUN_VIEW/$OS/reffiles/DBMS/Generator
```

X: name of the .sql file generated

XXX: name of the customer metadata

You need to export several environment variables before performing the ddl generation.

ENOVDatabaseType → DB2 or ORACLE

ENOVDB2Home → (if you use a DB2 SGBD) DB2 home directory

ENOVOracleHome → (if you use an Oracle SGBD) Oracle home directory

ENOVDBAID → the owner of the tables

ENODBAPSSD → tables owner's UNIX password

ENOVTableSpace → the table space

Copyright DASSAULT SYSTEMES 2003

37

## ddl Generation (3/3)

Under the Tool installation :/\$OS/code/bin, launch the following executable:

(update the environment using tck\_init and tck\_profile)

```
CATVBTSQlParserM ENOTemplateSch_create.sql TEMPLAT.sql ENOTemplateSch_update.sql
```

This executable will generate you the ENOTemplateSch\_update.sql with the new tables to create.

The database will not be dropped, it will be altered to add the new tables

Where:

ENOTemplateSch\_create.sql: previously generated

TEMPLAT.sql from the installation (don't forget to change the owner of the tables) or the last customization before this one

ENOTemplateSch\_update.sql : output

Copyright DASSAULT SYSTEMES 2003

38

# Update the Database

*You will become familiar with CAA V5 RADE Tools*

- ▣ **ddl files Execution**
- ▣ **Manual Update**
- ▣ **Create a new Environment**
- ▣ **Updating the Project**
- ▣ **Updating the Domain**
- ▣ **Updating of the database administration**
- ▣ **Updating the search Entities Definition**

Copyright DASSAULT SYSTEMES 2003

39

## ddl files Execution

**The Publish shell executes the ddl files generated if you are not in a simulation mode**

It is equivalent to manually execute the generated ddl files directly from your database sql command interpreter.

Copyright DASSAULT SYSTEMES 2003

40

## Create a new Environment

The Publish shell creates a new environment that is to say a new Business Domain. This name corresponds to the name of the framework.

Copyright DASSAULT SYSTEMES 2003

41

## Updating the Project

Equivalent to manually:

Edit the VPMAAdmin.adm file, delivered on the unload under ../\$OS/code/dictionary.

### Add the new Data Domain in the Default Project:

```
<PROJECT
  Name="DefaultProject"
  Oid="ENOP_default"
><DATARDB
  Name="ADMIN"
  AliasName="ADMIN"
  Oid="ENODR_ADMIN"
  OwnerDico="VPMADM"
  BusinessDomain="ENOBD_ADMIN"
></DATARDB ><DATARDB
...
></DATARDB><DATARDB
  Name="XXX"
  AliasName="XXX"
  Oid="ENODR_XXX"
  OwnerDico="Adminuser"
  BusinessDomain="ENOBD_XXX"
></DATARDB></PROJECT>
```

Copyright DASSAULT SYSTEMES 2003

42

## Updating the Domain

Add a new Business Domain XXX to the Domain :

```
<DOMAIN
  Name=" PRODUCT"
  Visible="Y"
  Oid="ENOD_PRODUCT"
><BUSINESSDOMAIN
  Name=" PRODUCT"
  MetaDataName="PRODUCT"
  Editor="VDefault"
  EnoviaFlag="Y"
  DataModeler="SDM"
  Loadable="N"
  Parameter="VPMPRODUCT"
  Oid="ENOBD_PRODUCT"
  SchemaName="ENOTemplateSch"
></BUSINESSDOMAIN><BUSINESSDOMAIN
...
></BUSINESSDOMAIN><BUSINESSDOMAIN
  Name="XXX"
  MetaDataName="XXX"
  Editor="VDefault"
  EnoviaFlag="Y"
  DataModeler="SDM"
  Loadable="N"
  Parameter="VPMPXXX"
  Oid="ENOBD_XXX"
  SchemaName="ENOTemplateSch"
></BUSINESSDOMAIN></DOMAIN>
```

Copyright DASSAULT SYSTEMES 2003

43

## Updating of the database administration

Save in database the settings:

The publish script set the customized environment then execute the load admin command

```
$RUN_VIEW/$OS/code/bin/LoadAdmin $CURRENT_FW/CNext/code/dictionary/VPMAAdmin.adm
```

Copyright DASSAULT SYSTEMES 2003

44

## Updating the search Entities Definition

RADE update the SearchEntitiesDefinition.xml file :

Under \$CURRENT\_FW/CNext/code/dictionary :

RADE adds the new entities in order to get this entities in ENOVIA LCA search CATLet

Copyright DASSAULT SYSTEMES 2003

45

## DMC without RADE

*You will learn how to use the customized files generated by RADE to customize the same Data Model without RADE installed on another Server*

- ▣ ENOVOutputDirectory
- ▣ ddl execution
- ▣ LoadAdmin
- ▣ Masks
- ▣ Environment

Copyright DASSAULT SYSTEMES 2003

46

## Publish generated files

- After a RADE publish, all the necessary files for manual DMC execution are stored in the \$CUSTODir/\$OS/code directory and its subdirectories :

- ◆ in bin subdirectory :
  - All libraries ( libxxxSch.a)
- ◆ in dictionary subdirectory
  - \*.dico
  - \*.metadata
  - VPMAAdmin.adm
  - \*.custo
- ◆ In reffiles/DBMS/ddl subdirectory
  - all ddl files (.sql or .clp depending on your SGBD)

Copyright DASSAULT SYSTEMES 2003

47

## ddl execution

- ◆ Ddl scripts execution :
  - ◆ Be careful, you may have to edit the generated ddl files to change the owner of the tables (it will be the case if database owners are different in development and installation environments)
  - ◆ The right order for ddl scripts execution is UPDATE, INSERT and then GRANT
  - ◆ So, for each modeler or totally new object (“xxx”) follow this procedure :
    - DB2 :

```
log in as db2adm
db2 connect to databasename user ownertableid using ownertablepassword
db2 -tvf $CUSTOName/$OS/reffiles/DBMS/ddl/xxxSch_update.clp
db2 -tvf $CUSTOName/$OS/reffiles/DBMS/ddl/xxxSch_insert.clp
db2 -tvf $CUSTOName/$OS/reffiles/DBMS/ddl/xxxSch_grant.clp
```
    - ORACLE :

```
Connect to SQL+
lplus (sqlplus, then su ownerdatabase )
@ $CUSTOName/$OS/reffiles/DBMS/ddl/xxxSch_update.sql
@ $CUSTOName/$OS/reffiles/DBMS/ddl/xxxSch_insert.sql
@ $CUSTOName/$OS/reffiles/DBMS/ddl/xxxSch_grant.sql
```

**You can check that the table creation commands are included in the update file**

Copyright DASSAULT SYSTEMES 2003

48

## Environment variables setup

- The first thing is to load the runtime environment in order to make easier commands use through the DMC process. Change to `$RUN_VIEW/$OS/code/command` directory on the server, then execute the following command line :

```
catstart -env ENOVIA_LCA.V5R10.B10 -direnv /CATEnv -run ksh
```

- Then create a `$HOME/CustomEnv` file to refer to your customization :

```
DIC=$OS/code/dictionary
BIN=$OS/code/bin
CAT=aix_a/resources/msgcatalog
export PATH=$CUSTOMName/$bin:$PATH
export LD_LIBRARY_PATH=$CUSTOMName/$BIN:$LD_LIBRARY_PATH
export LIBPATH=$CUSTOMName/$BIN:$LIBPATH
export SHLIB_PATH=$CUSTOMName/$BIN:$SHLIB_PATH
export CATDictionaryPath=$CUSTOMName/$DIC:$CATDictionaryPath
export CATMsgCatalogPath=$CUSTOMName/$CAT:$CATMsgCatalogPath
export CATInstallPath=$CUSTOMName/$OS:$CATInstallPath
```

- Then, launch it from the command line.

```
◆ . $HOME/CustomEnv
```

- The commands described in the next steps have to be executed from the current command interpreter, so that you don't have to use `catstart`

So, be careful, you have to achieve this step on each xterm you plan to use !

Copyright DASSAULT SYSTEMES 2003

49

## LoadAdmin

**Load the new Environment:**

```
LoadAdmin $VPMAAdminPath/NPMAAdmin.adm
```

```
$VPMAAdminPath= $CustoDir/$OS/code/dictionary
```

Copyright DASSAULT SYSTEMES 2003

50

## Masks

Update the DEFAULT MASK with :

VPMPeopleUpdate -m

→ Update automatically all the .custo files of the Runtime View checking consistency

Copyright DASSAULT SYSTEMES 2003

51

## To Sum Up

In this course you have seen :

- Methodology to customize the Data Model using RADE Tool
- Publish Shell
- Administration Concepts : Business Domain, Data Domain...

Copyright DASSAULT SYSTEMES 2003

52
